The Roughness Tester PCE-RT-11 is a portable measuring instrument for determination of surface roughnessaccording to Ra, Rz, Rq and Rt in just one device. The small roughness tester is especiallydesigned for fast measuring of roughness. The roughness is a term ofsurface physics that describes unevenness of surface height. The roughness tester worksaccording to the same piezoelectric micro probe principle like the highly accurate laboratorymeasuring instruments. The easy handling of the roughness tester as well as the high repetitiveaccuracy characterizes this device. After touching the button the piezoelectric micro probe ofthe roughness tester scans the surface within seconds and shows digitally, according to thepreselected cut-off length, either the value Ra, Rz, Rq or Rt.
